MagVenture TMS Therapy
Stimulating mental health.

Further details

MagVenture TMS Therapy® is a safe and effective option for the treatment of Major Depressive Disorder (MDD) and as adjunct treatment of OCD.

TMS is non-invasive, does not require any anesthesia and is not to be confused with Electroconvulsive Therapy (ECT). It does not affect cognitive function.

MagVenture TMS Therapy is covered by most insurance carriers.

5 reasons to get MagVenture TMS Therapy® in your practice

1. The most FDA cleared treatment options:
 - 3, 19, and 37 minute MDD protocols
 - 18 minute OCD protocol
2. Proven efficacy, usability, and quality
3. With MagVenture, you not only get a TMS device, but also
 - Onsite installation
 - Training of staff
 - Ongoing nationwide support
4. Very low treatment costs:
 - as little as \$1.37 per session
5. Easy, reliable patient management system

What is TMS?

During treatment, magnetic pulses are delivered through a magnetic coil to stimulate nerve cells in the part of the brain controlling the mood.

Repeated stimulation of this area of the brain can have an antidepressant effect on people suffering from Major Depressive Disorder (MDD).

It may furthermore be used as an adjunct treatment of adult patients suffering from Obsessive Compulsive Disorder (OCD).

Indications for use

*MagVenture TMS Therapy® is FDA cleared for:

“Treatment of Major Depressive Disorder in adult patients who have failed to receive satisfactory improvement from prior antidepressant medication in the current episode.”

**MagVenture TMS Therapy® is intended to be used as an adjunct for the treatment of adult patients suffering from Obsessive-Compulsive Disorder (OCD).
